### REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: **the specific limitations of** "combining a polymer resin with a supercritical gas to produce a single-phase solution, wherein the supercritical gas is generated by subjecting a gas to an elevated temperature and pressure" in the combination as claimed in **claim 1**, are not anticipated or made obvious by the prior art in the examiner's opinion. **For example, Takiyama et al. (4,954,141)** disclose a polishing pad for chemical-mechanical polishing comprising a porous foam with an average size of about 50 micron or less, and a porosity of about 60% to 95% of the average pore size (see fig. 1). **However**, the art of record considered as a whole, alone or in combination fails to provide or suggest, "combining a polymer resin with a supercritical gas to produce a single-phase solution, wherein the supercritical gas is generated by subjecting a gas to an elevated temperature and pressure".
